

## Capsulo™ Nd:YAG laser by Lumibird Medical

**April 14<sup>th</sup>, 2022 - CLERMONT-FERRAND, France**

**Lumibird Medical today announced the Launch of its new Nd:YAG LASER: Capsulo™.**

*From the expertise of Quantel Medical, the Capsulo™ Nd:YAG laser yields a fully integrated, easy to use and highly versatile laser platform, enabling efficient and accurate capsulotomy and iridotomy treatments.*

Each year, ten million cataract surgeries are performed world-wide\*. In the literature, the incidence of post-operative secondary cataract, varies anywhere between ten to fifty percent within three to five years.

It is clear the value of Nd:YAG laser treatment for secondary cataract remains undisputed; and with the redesign of Quantel Medical's flagship Nd:YAG Laser, Lumibird Medical delivers Capsulo™; the next generation technology, continuing to support this important growing market need.

Matthew Metcalfe, Anterior Segment Laser Product Manager at Lumibird Medical says this about the laser, "CAPSULO is built with exclusive high-quality optics delivering pristine clarity of view into the anterior and posterior segments of the eye. Advanced illumination with a variable-height light tower offers dual illumination angles of 16 and 7.5° for anterior and posterior laser applications".

The Capsulo™ Nd:YAG laser can be paired with the Quantel Medical Vitra 2® MultiSpot photocoagulating laser, also from Lumibird Medical, combining pan-retinal photocoagulation functionality through a single slit lamp.

Jean-Marc GENDRE, CEO Lumibird Medical explains, "Capsulo™, when combined with the Vitra 2® photocoagulator, offers an ideal all-in one laser platform, and we are extremely proud to provide this highly versatile solution into the hands of discerning ophthalmologists."

Delegates attending The **SFO congress in Paris**, 7 – 9<sup>th</sup> May 2022, will have the opportunity to see the Capsulo™ laser on the Lumibird Medical booth #F9. CE Marked and FDA pending, Capsulo™ laser is available for sale, now, in the EU.
